**Required Safety Precautions Checklist**

1. Ensure that the fire detection system will not be accidentally activated by smoke, dust or heat produced by operation
2. Ensure that all equipment used for this work is in proper working order
3. Ensure that all combustible material is in no less than 35 ft. from the operation
4. Ensure that all flammable material is in no less than 50 ft. from the operation
5. If combustible and/or flammable material cannot be moved to the prescribed distance, protect in place with welding curtains and a fire guard
6. Ensure that proper ventilation is maintained in the work area throughout the operation
7. Prevent smoke from traveling to other parts of the building
8. Provide a fire watch during the operation and for 30 minutes after the work has been stopped
9. Post warning signs when necessary to prevent others from accessing work area or from exposure to smoke or arc
10. All operations personnel shall be made aware of the fire evacuation and fire reporting procedures of the facility
